# Field Mill

## Field Mill

The Field Mill (German: Feldmühle) or also known as rotary voltmeter is a test equipment to measure electrostatic fields.

### Applications

In combination with the [BPT 3010](#) our Field Mill allows the measurement of electro smog:

- DC electric fields
- AC electric fields

Electrostatic fields are everywhere in our daily life. Such fields appear even in textiles, which are produced with a certain percentage of plastic fiber. The electric field intensity have a direct impact on the static charge.

The field intensity is measured and shown in volts per meter (=V/m).
